EXPERIENCE

Product Designer | Apexon

Apr 2022 - June 2026

Embedded as a Product Designer across multiple enterprise client engagements, leading discovery, interaction design, rapid prototyping, and design systems for fintech, logistics, capital markets, and mobility products.

Selected Client Engagements

Knight-SWIFT Transportation

Enterprise Logistics

- Partnered with the UX researcher leading the project to conduct interviews and journey mapping workshops for the redesign of a legacy AS/400 logistics platform.
- Rapidly established a lightweight design system by extending an existing component library, enabling efficient prototyping across the proposed product.
- Designed interactive prototypes used by the Product Owner to communicate the product vision and gather executive stakeholder feedback.
- Collaborated closely with engineering and product teams to iterate on workflows based on stakeholder reviews.

Mastercard

Enterprise Design System

- Designed a new accessible color system to replace an existing internal palette that failed accessibility contrast requirements for data visualization, establishing dark mode support and design guidelines for the team.
- Partnered with engineering to adopt the new system, reframing the change as an accessibility compliance need rather than a design preference.
- Established a governance process requiring designers to validate new colors against accessibility standards before adoption.

EuroCTP

Capital Markets Platform

- Audited stakeholder requirements and existing materials to define the information architecture for a multi-personal capital markets website, ahead of a regulatory provider selection.
- Designed the site’s core structure, including the homepage, dashboard, and instrument page, balancing retail and professional/institutional user needs.

ChargePoint

Consumer Mobility/ Maps

- Researched industry best practices and competitor experiences to identify opportunities for improving EV charging map interactions.
- Designed interaction concepts for map interaction, pin behavior, and station detail experiences.

EDUCATION

General Assembly - UX Design Immersive Certificate, 2022

University of California, Berkeley - Bachelor of Arts in Music, 2018
